

GUIDE FOR POULTRY FARMERS WITH RECOMMENDATION HOW TO IMPLEMENT REGULATION ABOUT BIOSECURITY ON THEIR OWN FARMS

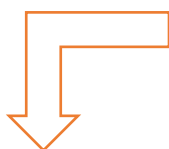

MAIN KEY POINTS

- Why this guide could be useful in the practice on poultry farms
- What is inside the guide?

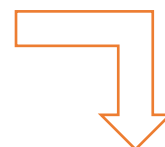

The University of Veterinary Medicine Budapest (UVMB) wrote a biosecurity practical guide to help farmers to implement the biosecurity regulations in their own farms.

Why it is important?

Increasing prevalence of infectious diseases (e.g. avian influenza)

Stricter and more detailed biosecurity regulations

Professional materials, trainings, monitoring

More effective biosecurity

What is the professional material made up of?

- **What does biosecurity means?**
- **What are the essential elements of biosecurity?**
- **Hygiene locks – the crucial part of the good farm hygiene**
- **Why is it important to protect poultry farms against infectious diseases?**
- **Prudent way of using antimicrobila products.**
- **Improper and correct practices, good and bad examples**
- **Recommendations, improvements**
